Pie Charts. One way in which we can graphically represent this qualitative data is in a pie chart. In a pie chart, each category is represented by a slice of the pie. The area of the slice is proportional to the percentage of responses in the category. This is simply the relative frequency multiplied by 100.

I've never liked energy pie charts (or bar graphs) because for everything but gravity, only changes matter, as you said. An alternative to having a pie chart with almost all thermal energy would be too include it as a reasonable fraction but have it grow, since we can set $\text{Energy}=0$ wherever we want.

many cases, qualitative analysis will also involve the separation of ions or compounds in a mixture. Examples of qualitative tests would include ion precipitation reactions (solubility tests) or chemical reactivity tests. The separation of ions is easily achieved by taking advantage of their solubility properties (Flow-Chart 1). Flow-Chart 1.
