Best Answer: I'm no botanist, but I think the Nutrient Cycle works almost the same in any environment. First, organic matter becomes waste (dead plants, animal excrement, dead animals) Second, enzymes present in the environment break down the organic waste into Nitrites, which are toxic to plants and animals.

### **Biogeochemical Cycles Questions for Tests and Worksheets**

Nutrient cycling is one of the most important processes that occur in an ecosystem. The nutrient cycle describes the use, movement, and recycling of nutrients in the environment. Valuable elements such as carbon, oxygen, hydrogen, phosphorus, and nitrogen are essential to life and must be recycled in order for organisms to exist.

### **Nutrient Cycles in the Environment - ThoughtCo**

In biology, the nutrient cycle is a concept that describes how nutrients move from the physical environment into living organisms and subsequently are recycled back to the physical environment. This circular movement of nutrients is essential to any given ecosystem, and it must be balanced and stable for the system to be maintained.
