Multivariate analysis is an extension of bivariate (i.e., simple) regression in which two or more independent variables (X_i) are taken into consideration simultaneously to predict a value of a dependent variable (Y) for each subject. 1-5 The result of regression is an equation that represents the best prediction of a dependent variable from ...

Multivariate Analysis - an overview | ScienceDirect Topics

Multivariate statistics is a subdivision of statistics encompassing the simultaneous observation and analysis of more than one outcome variable. The application of multivariate statistics is multivariate analysis.. Multivariate statistics concerns understanding the different aims and background of each of the different forms of multivariate analysis, and how they relate to each other.

Multivariate statistics - Wikipedia

Multivariate Logistic Regression Analysis. Multivariate logistic regression analysis is an extension of bivariate (i.e., simple) regression in which two or more independent variables (X_i) are taken into consideration simultaneously to predict a value of a dependent variable (Y) for each subject.

Multivariate Logistic Regression Analysis - an overview ...

Regression analysis is widely used for prediction and forecasting, where its use has substantial overlap with the field of machine learning. Regression analysis is also used to understand which among the independent variables are related to the dependent variable, and to explore the forms of these relationships.

data using various multivariate fishing trips. Even within one general type of multivariate analysis, such as multiple regression or factor analysis, there may be such a variety of "ways to go" that two analyzers may easily reach quite different conclusions when independently analyzing the same data. And one analyzer may
