While for atoms and molecules one tries to do better than Hartree-Fock, even more crude approximations are required for treating the many electrons in a solid. We can get a first idea of how crude the approximations are from the discussion of equations (17.25) and (17.26) in chapter 17 in the book of Ashcroft and Mermin.

There are certainly faults in the homeworks (and several solutions that could have been obtained much more directly); but in general, I have tried to correct any any mistakes noticed by the grader. The assignments were rather creative (and difficult) and generally did not come out of the course textbook, Ashcroft and Mermin's Solid State Physics.
