I have an option to choose between the two books Mathematical Analysis by Tom Apostol and Principles of Mathematical Analysis by Walter Rudin as I was gifted Rudin by a friend and ended up buying the other book as well. I will be indebted if someone told me which one is the tougher one and which one is better for the self-learner (I am in high school and have no access to a professor or anyone).

Apostol's treatment of basic topology as an extension of set theory is particularly good! Once you have a clear understanding of limits as they relate to topology then you'll finally "get" the whole delta-epsilon arguments from calculus. As an introductory text to the world of mathematical analysis I don't think this book can be beat.
