Analysis Of Observed Chaotic Data

Analysis of Observed Chaotic Data. The origin of the great relief was work I had done earlier on renormalization group properties of homogeneous, isotropic fluid turbulence. At the time I worked on that, it was customary to ascribe the apparently stochastic nature of turbulent flows to some kind of stochastic driving of the fluid at large scales.

Analysis of Observed Chaotic Data - GBV

The analysis of observed time series from nonlinear systems is usually done by making a time-delay reconstruction to unfold the dynamics on a multi-dimensional state space.

Abarbanel et al.: Analysis of observed chaotic data 1333 Even before beginning the analysis, the practitioner has to address the question of how to deal with data contaminated by other signals or by the measurement process itself. This contamination can come from environmental variables unmeasured by the instruments or from properties of the observation instruments.

The analysis of observed chaotic data in physical systems

Analysis of Observed Chaotic Data. A clear and systematic treatment of time series of data, regular and chaotic, found in nonlinear systems. The text leads readers from measurements of one or more variables through the steps of building models of the source as a dynamical system, classifying the source by its dynamical characteristics,...

In this thesis, analysis of observed chaotic data has been investigated. The purpose of analyzing time series is to make a classification between the signals observed from dynamical systems. The classifiers are the invariants related to the dynamics. The correlation dimension has been used as classifier which has been
