Overload resolution happens compile-time. So when we have == between generic types T and T, the best overload is found, given what constraints are carried by T (there's a special rule that it will never box a value-type for this (which would give a meaningless result), hence there must be some constraint guaranteeing it's a reference type). In your Follow Up 2, if you come in with DerivedTest ...

### **Can't operator == be applied to generic types in C# ...**

So I have been reading the document "Group Policy processing and precedence". I get that policies are applied in the order of local, site, domain, organizational unit, child organizational unit. ...

### **What is the order group policy settings are applied?**

An optical fiber is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical ...
