Data analysis Sophisticated data analysis will help you spot patterns, trends and relationships in your results. Data analysis can be qualitative and/or quantitative, and may include statistical tests. An example of a statistical test is outlined below. Quantitative analysis: Descriptive statistics

Data analysis - FSC Geography Fieldwork

Data analysis is the process of extracting information from data. It involves multiple stages including establishing a data set, preparing the data for processing, applying models, identifying key findings and creating reports. The goal of data analysis is to find actionable insights that can inform decision making.

Data Analysis: Online Courses from Harvard, MIT, Microsoft ...

data presentation (line/bar/pie/table), students must get used to analysing the data and proposing what they have found. For line graphs and bar charts, students should be given the opportunity to present the data in graphical form. For pie charts and tables students should simply be encouraged to analyse and evaluate what the data shows.
