experience teaching applied microeconomics to upper-division undergraduate students. Examples used throughout the text begin with basic concepts familiar to students who have completed a basic microeconomics course, but build on these basic concepts in a host of new ways. Each concept is illustrated using a specific mathematical equation.

All of these problem fall under the category of constrained optimization. Luckily, there is a uniform process that we can use to solve these problems. Here's a guide to help you out. Maximizing Subject to a set of constraints:  $(x, y) \geq 0$  max  $f(x, y)$ , subject to  $g(x, y) \leq 0$  Step I: Set up the problem Here's the hard part.

### **Constrained Optimization: Step by Step**

In order to accomodate unanticipated events or conflicts in your schedule, we will drop the lowest score on your problem sets when computing your problem set grades. Questions on problem sets should be directed to TAs first when possible.
