We also know that individuals of all species are heterozygous for many genes. To understand evolution, genetic variation is studied in populations. A population is defined as a group of individuals of the same species that interbreed. Members of a population share a common group of genes, called a gene pool.

students to analyze amino acid data and draw conclusions about the evolution of coat-color phenotypes in the rock pocket mouse. Students review key concepts and mechanisms of evolution, including mutation, gene flow (or migration), genetic drift, and natural selection. Students should come to understand that evolution can and does repeat itself.

The making of the Fittest: Natural Selection and Adaptation

Summary. In this activity, students use simulations with beads to explore the concepts in the short film The Making of the Fittest: Natural Selection in Humans about population genetics, the Hardy-Weinberg principle, and how natural selection alters the frequency distribution of heritable traits.. TEACH TIME: Three 50-minute class periods.
