## **Human Excretory System Answers - Biology Is Fun**

Answer (1 of 1): Excretion is the process of the body ridding itself of waste after taking the required

energy, water and mineral values from the food and nutrients it has consumed. Plants have two different sets of excretion; Photosynthesis and Respiration. Oxygen is a waste product in photosynthesis as carbon dioxide is broken down into sugar and oxygen.

### What Are The Importance Of Excretion In Plant And Animals ...

Excretion In Plants And Animals A large number of waste products are formed during metabolic activities in the body. These products become toxic or harmful if it is retained inside. Large amounts of carbon dioxide and water are produced by metabolism of carbohydrates, fats and proteins. Nitrogenous wastes such as ammonia, urea, uric acid, etc. are formed from proteins and other complex ...

# Excretion In Plants And Animals - Life of Processes ...

Excretion in plants differs from that in animals because of the following reasons. Plants have got a lower metabolic rate compared to animals therefore the rate of accumulation of metabolic waste is very low; Plants are autotrophs and therefore synthesize their own organic requirements according to the demand for them.

#### Excretion | Biology notes for O level with Questions

Animal and Human Excretion Animals and humans excrete various metabolic wastes through specialized organs, such as our skin, lungs, liver, kidneys, and intestines. Let's look at each one.

# Excretion: Definition & Examples - Video & Lesson ...

In animals, some of the waste products are excreted (removed) by the kidneys and released in urine (pee). A bird's white droppings contain its waste products. Animal excretion > Animal waste products include the gas carbon dioxide, which is excreted (removed) from the body using the lungs by breathing it out.
