Abstract: Antacid analysis and titration may be used in order to determine the effectiveness of an antacid tablet, TUMS, in neutralizing acid. Testing the effectiveness of the tablet will be done with a technique, back titration, which is similar to standard titration. By adding acid to the tablet early on in the procedure the addition of NaOH, the titrant, can still be added in order to ...

Antacid Titration (part 1)

At the conclusion of the experiment, empty the burets and rinse them three times with distilled or deionized water. Data Analysis Stomach antacid tablets are buffered and cannot be titrated directly with acid solutions. Excess HCl is added to "destroy" the buffer and react with the antacid. Only the unreacted HCl is titrated with the NaOH.
