Analyzing The Heart With Ekg

Analyzing the Heart with EKG. Recommended for High School. An electrocardiogram (ECG or EKG) is a graphical recording of the electrical events occurring within the heart. In a healthy heart there is a natural pacemaker in the right atrium (the sinoatrial node) which initiates an electrical sequence.

Obtain graphical representation of the electrical activity of the heart over a period of time. Learn to recognize the different wave forms seen in an EKG, and associate these wave forms with activity of the heart. Determine the heart rate by determining the rate of individual wave forms in the EKG.

Description. When a normal heart is beating this is the result of electrical impulses that spread through the atria and then the ventricles in an organized, sequential manner. Atria, then ventricles, atria, then ventricles over and over again. When analyzing the tracing you will first check R wave to R wave across the strip.

EKG Interpretation Training. The focus of this introductory EKG course is to provide a tutorial about the main features of EKGs along with a method for analyzing EKGs. This method includes assessment of rhythm, calculating heart rate, observing P-wave forms, measurement of intervals and segments and the evaluation of other relevant waves.

Electrocardiography (ECG or EKG) is the process of recording the electrical activity of the heart over a period of time using electrodes placed on the skin. These electrodes detect the tiny electrical changes on the skin that arise from the heart muscle's electrophysiologic pattern of depolarizing and repolarizing during each heartbeat.

EPV #8: Write a LabVIEW program to graphically record an EKG tracing of heart activity. You will use a Vernier interface and an EKG Sensor for data collection with a sampling time of 10 seconds and a sampling rate of 100 samples per second. You should make two graphical displays — the first plotting the data in real time on a chart, and the second displaying the plot on a graph after all ...
