I am trying to work with Windows Azure PowerShell module on Windows 8.1. I have downloaded and installed the Azure module and in start I can run and use the "Windows Azure PowerShell" which is a PS...

powershell - Import-Module Azure fails - Server Fault

Static properties for your expensive connection objects will work fine, but I recommend wrapping them in Lazy<> so that you get guaranteed thread safety out of the box.. Based on the sample blog post that you linked to an example of making the bucket reusable across all your function calls in a guaranteed thread safe way might look something like this:

.net - Azure Functions: Singleton for expensive object ...

What is a good open source implementation of a thread pool for C++ to use in production code (something like boost)? Please provide either your own example code or a link to example code usage.
