Hints are offered for many of the exercises in which partial differential equations are solved in chapters 2, 4, 5, 7, and 10—the core of a typical first course. These hints often include the separation for the variables of variables themselves, so the problem is more straightforward for students.

Let u1(x,t) denote the solution in Exercise 5 and u2(x,t) the solution in Exercise 7. It is straightforward to verify that u=. u1 + u2 is the desired solution. Indeed, because of the linearity of derivatives, we have utt =(u1)tt +(u2)tt = c2(u1)xx + c2(u2)xx, because u1 and u2 are solutions of the wave equation.
